

## BUSINESS SOLUTIONS

# Medflow

Medflow is a web portal designed for health services which allows your business to share sensitive data with all your customers and partners.

### How it Works

Medflow was designed to facilitate the interaction between your health services, specially your Occupational Safety and Health Measures Department, and your customers.

Many times, the communication between your services and your customers HR department is not easy. It's almost impossible to keep track of your customer needs using traditional means of communication such as, phone, email, etc.

With Medflow, your customer has an open window to your services, 24/7, always available. With this tool, your customers can manage their workers personal data, schedule medical appointments for their employees' health check-up and verify the results regarding their staff ability for work. Finally, your customers can download electronically at their offices, a set of reports and legal documents which reduces the amount of paper and facilitates organization. They can control your invoicing based on the attended exams.

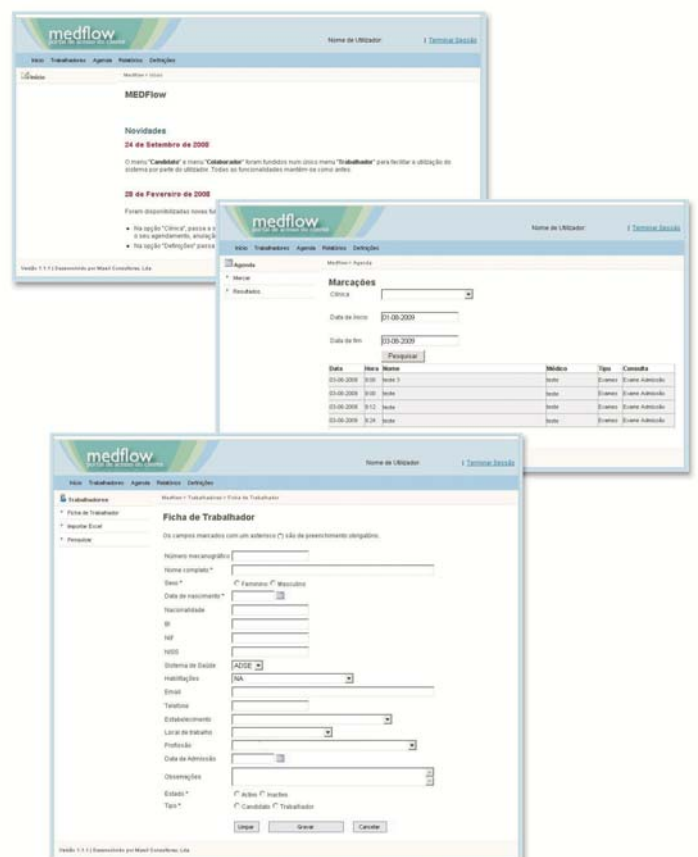

### Technology

This application has been developed and tested to run on your browser. It uses the latest Microsoft .NET framework and follows the best patterns and practices suggested by Microsoft. For data storage and security, it also uses Microsoft SQL Server, a strong tool to protect and manage your data in a confident way.

The web portal was developed into several modules being possible to customize the access to each one according to your customer needs. All connections made to your web server, are secured by strong encryption technology, which guarantees that all data shared with your customers keeps safe and confidential.

### Business Solution

Medflow is a solution which gives you and your customers the competitive advantage of sharing your sensitive data 24/7 with all the safety needed. There will be no more late phone calls/emails asking for medical results. Your web portal has everything that your customer needs.

## Features

|                              |   |
|------------------------------|---|
| <b>Employees Information</b> | Allows your customers to add, update personal and contact data from their employees. For large customers, this information can be uploaded using spreadsheets with data exported from HR software. Also allow your customer to indicate which workers no longer work with them, so, your records are always updated and actual. |
| <b>Calendar</b>              | Manage your medical staff assigned to your customer, keeping track of all their medical appointments; Control all medical exams made by your customers' workers.  |
| <b>Alerts</b>                | With e-mail notifications or SMS, you can remind your customers' workers that they have medical appointments or exams scheduled for a specific date. This reduces the usual levels of absence related with these activities, increasing your medical staff availability.  |
| <b>Reports</b>               | Analyze several statistical reports, such as, medical appointments and exams volume by month, or workers absence to medical exams;  |
| <b>Electronic Documents</b>  | Allows your customers to receive electronically medical reports and legal documents digitally signed, stating their workers health and ability to work; this allows to decrease the amount of paper printed and sent and also to increase data organization.  |
| <b>Ready for integration</b> | All operational data can be easily integrated with your accounting software facilitating any invoicing processing needed. With Web Services technology it is also possible to integrate with other software that you work with in a daily basis.  |
| <b>Web Interface</b>         | Using only your traditional web browser, you can access to all features of the application. No software installation needed, you only need your login credentials to start working with Medflow.  |
| <b>Security</b>              | Medflow runs over HTTPS protocol, ensuring that all information transferred between computers is encrypted and therefore secure even when data has to cross over internet.  |
