

TRANSPORTER SUITE

Bient

The Business Intelligence enterprise module on MAEIL Transporter Suite applications, using MS SQL 2005 technologies, allows supporting Management decisions based on the real-time financial and operational results of your enterprise.

Operational Analysis

The operational analysis included in the Business Intelligence module allows you to see reports with a more operational overview of your business. You can get total results or drill-down to get more specific information. For example you can get several reports ordered, grouped or summed for many different measures such as: weight, teu's, size and type of equipments, goods, etc. Easily, you can get an instantaneously list of quantities of cargo by port and by cargo type, as an example.

Financial Analysis

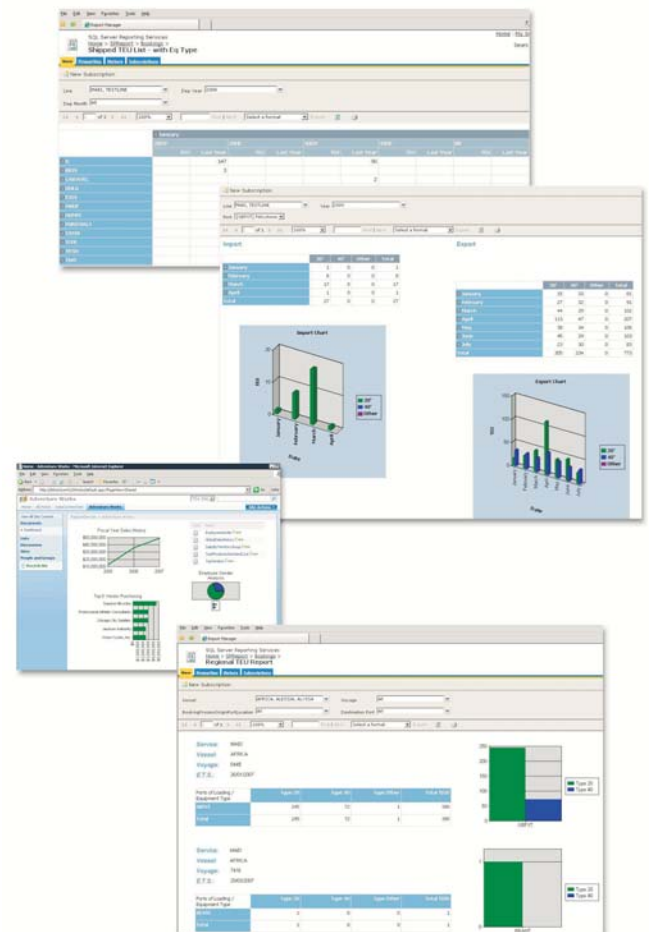

With the financial analysis functionality built-in Business Intelligence module you can view all sort of financial information, like billing and financial results, to successfully control your business expenditures and incomes. Again, it's possible to define dimensions from where you can get results: per date or period of time, by vessel, voyage, bound (import\export), trade, customer, and so on. All results can be immediately exported to excel, pdf, word to easily collaborate with such valuable information.

How it Works

In order to help your enterprise business grow, Business Intelligence Module works along with TPS (Transactional Processing Systems): MAEIL Transporter (Operational) and Dynamics NAV (Financial), to extract the needed information. However it can be linked to other applications to get your results. As a Case Study we have linked this module to MSC Link application (MSC Portugal) on the operational side and to PHC and Primavera software on the financial side.

Feel and Touch

To help optimize your much valuable time the information processed by the Business Intelligence Module is presented in a web application managed from any browser and can be linked to a Share Point application or website. It allows Windows domain authentication over the network and allows permissions to be configured per user and groups to access report data. Easy and understandable, it offers several possibilities for filtering, grouping, drill-down, and automatic subscription.

Features

- Advanced Report Authoring. With powerful design tools, we are able to author reports accommodating any reporting need. Empower every business user with interactive, personalized, and relevant reports or simply enable them to build their own reports, with the Report Builder tool.
- Web-based reporting for partners and customers. Organizations can deploy interactive Web-based reports to deliver information to customers or partners over extranets or using the Internet. Reporting Services isolates report consumers from the complexity of the underlying data sources, while providing personalization and interactivity.
- Powerful filtering and dropdown tools. Each report allows any kind of single or composed filter, making possible to have exactly and only the information you need at any moment.
- Export reports to several formats. Edit and share your reports by exporting them to PDF, Excel, Image, XML and other file formats.
- Sharepoint Integration. With Microsoft Sharepoint platform integration, users will more easily find, use and share information across the enterprise.
- Report subscription. Receive up-to-date analysis from your reports on your email, on a periodic basis. The user is able to schedule the desired report subscriptions, turning report delivery more dynamic, data-driven and automated.

Reports

Operational Analysis

- Import and Shipped TEU List;
- Monthly Statistics, with TOP 10 clients;
- Monthly and total TEUs lists, with homolog periods comparison, per line and type of service (import/export);
- BL's map, by trade, of import and export;
