

TRANSPORTER SUITE

Depott

Giving full support on a container depot's daily activities, our product is an essential tool to help you manage your business the most proficiently way.

Depot Management

Through the system our clients can achieve the management and position of all equipments on their depot area and at their responsibility, can trace and record the dates and movements of each unit, generate automatic invoicing based on specific rules, and whenever necessary apply demurrage invoices.

Billing

Depott was built to allow storage billing, output and input movements and additional services, by period or import/export vessel call. Depott System can integrate all invoices into a Financial Package. This integration it's very useful in a way that you no longer need to have various application generating bills, and manage them separately.

Movements

To get full control of containers, Depott can keep track of all movements. The system can record the status, the type and the date-time in which the container's movements were made. Additionally to movements, you can also define sequence of movements to help you manage extra services like washing, stuffing and lashing, among others.

Reports

Several reports are available to support the operational and management users of the system, allowing exchange of information in real time with clients and partners, about their equipments positioning, history details about gate inn's and gate out's, stock control and invoicing.

Container Repair Control

When Depots/Terminals report damaged containers, the system can keep record of the complete follow-up process. Default or extraordinary repair estimations can be validated based on images kept on the module.

Features

Management per Line	All the information management can be done per Line, i.e. the business can be done with specific customizations for each company, with different equipment and movement codes, reports, rules and costs.
EDI Messages	The system allows all type of EDI messages integration with Shipping Lines and Agencies, to automate and accelerate communication between partners and avoid human error, for large amounts of information exchanged.
Primavera Software Integration	Export Depott's bill information to Primavera and automatically block it on Depott.
Add navigation Lines	You can add navigation lines so that it is possible to add movements, billing and daily reports to your depot.
Billing Rules	There are four billing rules that you can choose from: Storage, Gate in, Gate out and Transport for all kind of different services provided. It's possible to define rules for exemption of some costs, when for example selling containers.
Movement Sequence	You can choose between three movement sequence types, they are: Terminal, Other and Next. Based on these types, it's possible to setup all the necessary movements allowed to be entered in the systems, detecting exceptions when occur.
Reports. System.	Generates several forms to be signed for the entrances and releases container authorization.
Equipment Status	All the movements with Status ST (storage), will appear in the stock control report for the depot. All the other movements with different status will be excluded.
Repair Control	Total flexibility to control all repair activities per container.
Not only for containers	In the Mael Depott you can keep track of other type of equipment, tracking goods like granite.
Report Subscription	Schedule reports to be sent to your email, automatically and on regular basis, as daily, weekly or monthly, as you need the information available on your application.
