

TRANSPORTER SUITE

Liners

Agencies

It has been developed to be integrated and connected with the Agencies applications, to control their activities and reporting.

Architecture

The system is prepared to work on different architectures, depending on the Liner and Agencies infrastructure and communication. It can be deployed on a central environment allowing remote access to the agencies, based on security internet access, or can be configured to work independently for each site, and schedule regular communication between the remote networks and central system.

On both architectures it's possible to plan a vessel voyage, with all port calls defined and it's agents with the schedule (date and time) for each of them. Based on this then it can be possible to manage booking and rate requests from the Agencies and integrate all their information.

This work can be done locally on each Agencies application and integrated directly into Liners, or it can be done directly into the system on a web based access.

Modules

Besides bookings and rates, it's also possible to manage all equipment movements for agents, again integrating them or inputting it directly after authentication in a secure web environment.

Based on Freight Manifest information, it's also possible to raise local invoices for the Agents, and calculate disbursement invoices for the Line.

This application is developed to manage business operations of a Liner Shipping Company. It allows these organizations controlling all their information processes both on the operational and financial sides.

Agents Access

With the Liners system, you will supply web-access to centralize liner Application to all agencies, accelerating business operations and results.

Features

EDI engine	Complete EDI Engine built inside Agencies provides compact communication functionalities in combination with code translation layer. Configured Web Services provide full automatic communication and data integration between Maeil Transporter and other authorities and partners. Example: The Port of Felixstowe transacts more than 100 messages a day, using Web Services and EDI-FACT CUSCAR and CODECO messages.
Container Control and Operational Cost Optimization	Container Control specific functionalities for container moves, handling in/out cost control, repair management and invoice checking, repair pictures repository, automatic sequence moves, disciplinary container moves rules, demurrage and storage control, leasing agreement control and management per container. All this functionalities integrated with the booking data and functionalities providing automatic procedures to reduce manual work, improve communication and delivering real-time information to all departments, partners, and clients.
Business Performance Reporting and Management	Access critical information from across your entire business lifecycle, and maintain visibility into activities with business intelligence, such as container stock, sales, and client performance and payment speed which help you analyze critical data holistically.
Real-time Financial and Operational multi-dimensional analytical technology	Your business can support distinct departments, offices, and companies within one database and apply intercompany rules. Track financial transactions results using the multi-dimensional booking accounting system. Control results by Vessel Voyage, Period, Booking, Customer, Service or any other dimension in Maeil Transporter.
Integration with familiar technology	Help maximize your investment, reduce costs, and build on your IT infrastructure by integrating Maeil Transporter solutions with third-party tools, Microsoft Office®, Microsoft BizTalk® Server, Microsoft SQL Server®, ReportingServices®, and Microsoft Office SharePoint®.
Communication Translation Layer	Speed up your communication by using the Agencies Communication Translation Layer. Easy to configure and even more reliable to use, this layer offers complete transparency to users when communicating to partners, lines, customers and authorities. Once defined no user intervention is necessary to make business to business successful project.

Maeil Consultores is a company devoted to the development of information engineering systems and dedicated to the integration of technologies in shipping business. It was founded in 1999 through the creation of a technological infrastructure aiming at the development of information system solutions. Furthermore, the company relies on information and software engineers acting in the market and specialized in consultancy, implementation, training and development of standard software and the support service to small and medium-sized business.
